Support

Support for this plug-in is ONLY available at <http://www.keal.me.uk>

Installation

This plugin should be installed in the usual way using the e107 plug-in manager. It has been tested with version 7. I can make no guarantee that it will work with any other version of e107.

Drop the folder into the 107 plugins folder and go to the plugin manager and install it.

Go to configuration and configure the plug-in. You will also need to create categories, venues and gigs. If you want the menu shown go to menus in the main admin area and activate it.

2dopey has created some graphics to go with the plugin. Gae.gif is the default banner. Put banners for categories in the images/catlogo directory and images to include with the gig in the images/includes directory.

You have to create your own thumbnails to insert into gig details and if you pick a big picture then clicking on the thumbnail will open the big picture in a new window. If you don't pick a thumbnail no picture is displayed at all, so don't pick a big picture and no thumbnail otherwise it won't work. The pictures you want to use are stored in the includes directory of the images directory (there is no upload facility yet).

About Version 1.7

Fixed bugs in date handling in admin gig and submit new gig.

Shortcodes in ukgigs_template.php can be changed to suit your preferred date display according to the php date function (see <http://www.php.net/manual/en/function.date.php>) Applicable Shortcodes are {UKGIG_DATE_DETAIL}, {UKGIG_STARTDATE} and {UKGIG_ENDDATE}

The date setting in admin config just affects the entry of dates in admin gig and submit new gig.

About version 1.6

Added meta tags for the plugin for description and keywords. Change date picker to the e107

javascript popup calendar. Added option for admin to select date sort order. Further security enhancements and general code improvements. Converted to a templated system using Shortcodes to give admins opportunity to change layout etc. Added meta tags and page titles.

About Version 1.05

This version has security tightened up, better handling of text, default order is now date of gig plus RSS feeds.

About version 1.04

This adds notification on a new submission. Fixes a couple of bugs, removes all support for version 6+. Makes operation slightly easier. Also works with the latest and recent menu/page core plugin. Added icons (which respect imode in the theme) for email to a friend and printable version.

Best when upgrading – delete all files in the top level of uk_gigs_menu (you can leave the other folders intact. Copy the new uk_gigs_menu over the old one, go to plugin manager and upgrade.

There was no version 1.03 released

About Version 1.02

This version is e107 V7 compatible

About version 1.01

Initial version.

To Dos

Add a picture upload option.

Do documentation for shortcodes and templates.

Just for Info

I use PDFCreator from <http://sourceforge.net/projects/pdfcreator/> as the PDF creator, a great free and comprehensive utility.

For editing I use PHP Edit from <http://www.waterproof.fr/>
